MD ARIFUL ISLAM
JUNIOR FRONT-END WEB DEVELOPER
UTTARA, DHAKA-1230
Social Info : +8801727256612(whatsapp), ariful18374@gmail.com, **Github**, **LInkdiin**, **Portfolio**

Career Objective : My goal is to become a proficient software engineer. I am steadily progressing on my web development journey, which is my area of greatest comfort and expertise. My aim is to continually grow and enhance my skills in this field.

Projects

Project 1 : **Name** : PureLife Health   Github Server || Github Client || Live Link
Technology : React,TailwindCss, Express, MongoDB, JWT, Firebase, Nodemailer, etc.
Description : Our website organizes medical camps such as blood donation and health check-ups. Participants can join easily, with some camps being free and others requiring payment via Stripe. Organizers manage camp details for seamless registration. We connect healthcare initiatives with participants, ensuring a straightforward experience for all involved.
Features :
- The purelife health website simplifies participation in medical camps and streamlines management for organizers, enhancing community health engagement
- Encourages participation in health initiatives, improving community health.
- This flexibility allows organizers to offer various camps, making essential health services accessible to a wider audience and promoting social equity in healthcare..

Project 2 : **Name** : Food Hut   Github Server || Github Client || Live Link
Technology : Tailwind,React, Express,Javascript, MongoDB ,Jwt, etc.
Description : Our food sharing website allows users to add, manage, update, and delete their food items. Users can request food from others and respond to requests. Every user can share their own food and request food from the community, fostering a collaborative and supportive food-sharing network.
Features :
- Helps minimize food wastage by redistributing surplus food within the community.
- Provides easy access to essential food items, supporting individuals in need.
- Facilitates sharing and requesting of food items, fostering a supportive community network

Project 3 : **Name** : Peaceful Tour   Github Server || Github Client || Live Link
Technology : React, Express, MongoDB, Firebase, DaisyUI, etc.
Description : Our tourist website features a comprehensive spots section where users can explore detailed information about various locations. Registered users can add their own travel spots, complete with details, to the all spots section. Users can also edit, update, or delete their added spots, making trip planning easy and personalized.
Features :
- Allows users to discover and explore various travel destinations, enhancing their travel experiences.
- Enables users to personalize their travel itineraries by adding, editing, and updating travel spots.
- Promotes community interaction and feedback, enriching the travel experience for users.

Skills

I.React   II.Express   III.MongoDB   IV.NodeJs   V.TailwindCss
VI.Javascript   VII.NextJs   VIII.Github   IX.Microsoft Office(Word,Excel,Etc)

Education

Subject : B.Sc In Computer Science and Engineering
Institute : World University Of Bangladesh

Certifications and Courses

Course 1 : **Course Title :** Complete Web Development Course With Jhankar Mahbub
Provide organization name : Programming Hero
Course duration : 6 months

Course 2 : **Course Title :** Advanced Course In Microsoft Office
Provide organization name : National Institute Of Tecnology (NIT)
Course duration : 6 months

Languages

- English (Proficient)
- Bangla(Native)
